Detached Retina - Drugs.com The retina is the light-sensitive layer at the back of the eye that converts light images into nerve impulses that are relayed to the brain to produce sight. When the retina separates from the deeper layers of the eyeball that normally support and nourish it, the retina is said to be detached. Detached Retina (Retinal Detachment) | Kellogg Eye Center ... A detached retina occurs when the retina is pulled away from its normal position in the back of the eye. The retina sends visual images to the brain through the optic nerve. When detachment occurs, vision is blurred. A detached retina is a serious problem that can cause blindness unless it is treated. Retinal detachment - Diagnosis and treatment - Mayo Clinic Diagnosis. Your doctor may use the following tests, instruments and procedures to diagnose retinal detachment: Retinal examination. The doctor may use an instrument with a bright light and a special lens (ophthalmoscope) to examine the back of your eye, including the retina.

Detached Retina - Symptoms, Causes, Surgery, Recovery Detached Retina. The retina is the light-sensitive tissue found at the posterior portion of the inner eye. It focuses the images that comes through the lens and converts them into electrical impulses which are sent to the brain via the optic nerve. Retinal Detachment, Detached Retina - Florida Retina Institute A retinal detachment is when the retina peels away from the back wall of the eye. The retina does not function properly when it is detached, resulting in seeing a peripheral shadow that can progress to cause significant blurring of the vision. Retinal Detachment Symptoms, Causes, Recovery & Surgery A retinal detachment is a separation of the retina from its attachments to the underlying tissue within the eye.; Most retinal detachments are a result of a retinal break, hole, or tear. Most retinal breaks, holes, or tears are not the result of trauma but are due to preexisting factors such as high levels of myopia, prior ocular surgery, and other eye diseases.

Causes, Symptoms and Treatment of a Detached Retina A detached retina, which occurs when the retina becomes separated from the tissue which normally supports it, is an extremely serious eye condition which must be treated as a medical emergency. The retina is the very thin sensory membrane which lines the back of the eye and is only about the size of a postage stamp. Detached Retina - eMedTV: Health Information Brought To Life A detached retina occurs when the retina is moved from its normal position in the eye. It requires immediate medical care if permanent vision loss is to be prevented. Risk factors for the condition include diabetes, older age, or an eye injury. What Is a Detached Retina? - WebMD If your retina gets torn, the fluid inside your eye can leak underneath and separate the retina from its underlying tissue. That's retinal detachment. That's retinal detachment. Go to the eye doctor.
